

ABSTRACT OF THE DISCLOSURE

5 A water flushing unit and a method of making such comprising a cover plate that is to be mountingly installed to replace the original equipment cover plate of a shower valve. The modified cover plate has a drain conduit which includes an on/off valve. The on/off valve is in turn connected to a flexible tube. Flushing water from the shower valve is to be confined and directed through the drain pipe and, with the on/off valve in an open position, is caused to flow through the drain tube.
